

COLOURED GLASS

TM

Schneppa Glass
premium products for amazing concrete

Schneppa Recycled Crushed Glass™ comes in a variety of beautiful colours to suit a wide range of tastes. Our 5-10mm glass is carefully tumbled to remove any sharp edges. A patented polyurethane coating is then applied to all sides of the glass.

COLOURS: 19 AVAILABLE

AVAILABLE SIZES: 5-10MM

SOLD BY: 2.5KG AND 5KG BAG

USE IN: PERFECT SIZE FOR SEEDING

INTO BOTH POLISHED CONCRETE &

EXPOSED AGGREGATE CONCRETE

APPLICATIONS. A GREAT ALTERNATIVE

TO TRADITIONAL GARDEN MULCH. .

When using tumbled glass in concrete, it is imperative to use an aggregate that has been properly treated & coated to ensure a successful & long lasting installation.

Schneppa Glass™ has been carefully treated on all sides with a high quality patented coating to ensure that the glass pieces will not slip or pop out of the concrete. There is also no chance of leaching, which can occur when untreated or improperly prepared glass is used in exposed aggregate or polished concrete installations. The colour pigments used are similar to those used in high performance paints, industrial and architectural finishes. Application of the specified colour coating to the glass pieces provides a semi-transparent colour which allows a certain amount of light to pass through. Having the underside coloured allows the colour to show through even if, after many years, the top layer is abraded away.
